# ANTH 490.001

Systems Thinking and Change

This ANTH 490 course will familiarize upper-level undergraduates with systems thinking and directed change within the realms of research or problem-solving that anthropology degree holders might encounter in the public sector, private sector, or third sector. Systems thinking involves identifying and comprehending interconnections among individuals, groups, organizations, and locales. It requires identifying and remedying persistent obstacles hindering the attainment of efficacy, equity, or well-being within a given system. Systems thinking equips change agents to implement appropriate interventions.
